```
ref_table - must point to a valid struct (can not be NULL)
Space for this will get allocated depending of t
                                                                                                           table of inmod in a usable form after this call.
                                                                                                                                                      we can call the various functions in this file.

3. input_section - must be a valid ptr to a section desrciptor.

A section of inmod.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       packRefDescr(ref_table -> table(ref_count), current_address);
                                                                               inmod's entries. This will have the reference

    mem_addr - The ref_table will be packed as it appears in the
object module, starting at mem_addr. There must be
sufficient space for the reference table.

                                                                                                                                                                                                                                                                                                                                                                                               input_section -> ref_tbl_offs:
